

Credit without moving collateral

Lock mock USDC on Sepolia.
Prove the receipt. Borrow on Creditcoin.

NO VALID PROOF

0
credit lines

Attestcoin is the gate,
not a decorative oracle.

Cross-chain credit has a reporting problem

TODAY

A bridge, oracle signer, or operator says collateral exists.

The reporting layer becomes part of the solvency boundary.

ATTESTLOCK

Creditcoin verifies the exact successful escrow receipt.

The asset stays on Sepolia. The line opens only after BlockProver succeeds.

One proof opens one bounded line

The worker relays proof. It cannot manufacture credit.

The safest line is the one that never opens

0

invalid proofs
